Quick Guide

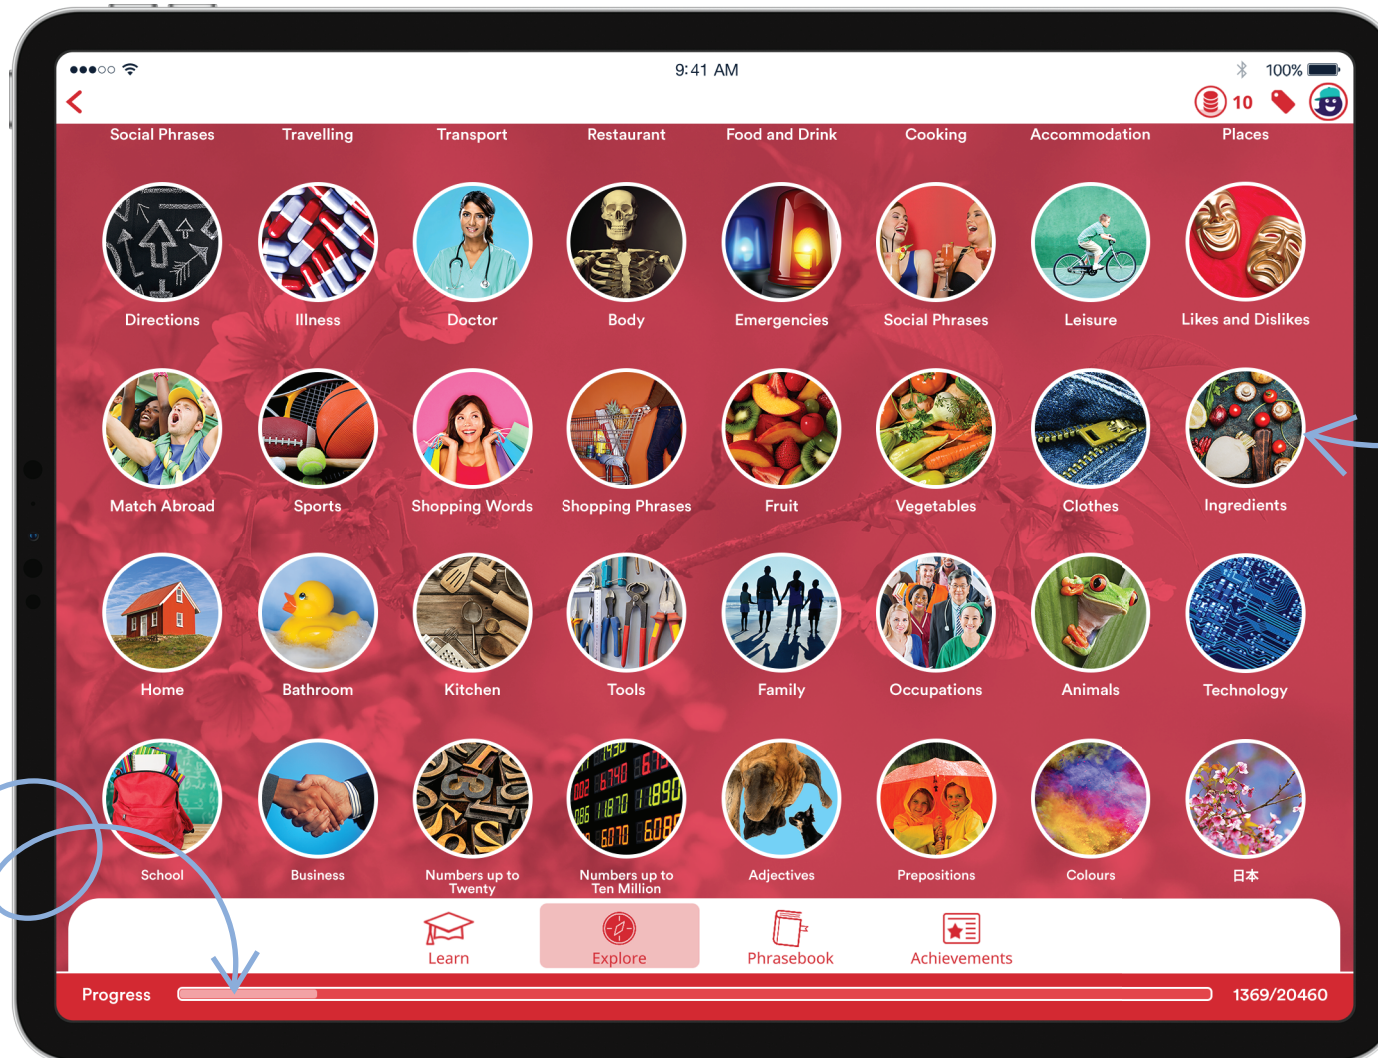

Language Menu

With over 150 languages to choose from, the menu makes it easy to browse, search and download what you need. Regional dialects are included as separate languages helping users learn the version that fits best. The Menu structure also updates with your downloaded and recently played languages for faster navigation.

Topics are organised into structured learning journeys designed to help user immerse themselves in a language. Begin with the basics in the Getting Started category, or create your own path by exploring other themed categories - each crafted to build confidence and deepen understanding.

Scrollable topic grid

Overall language progression

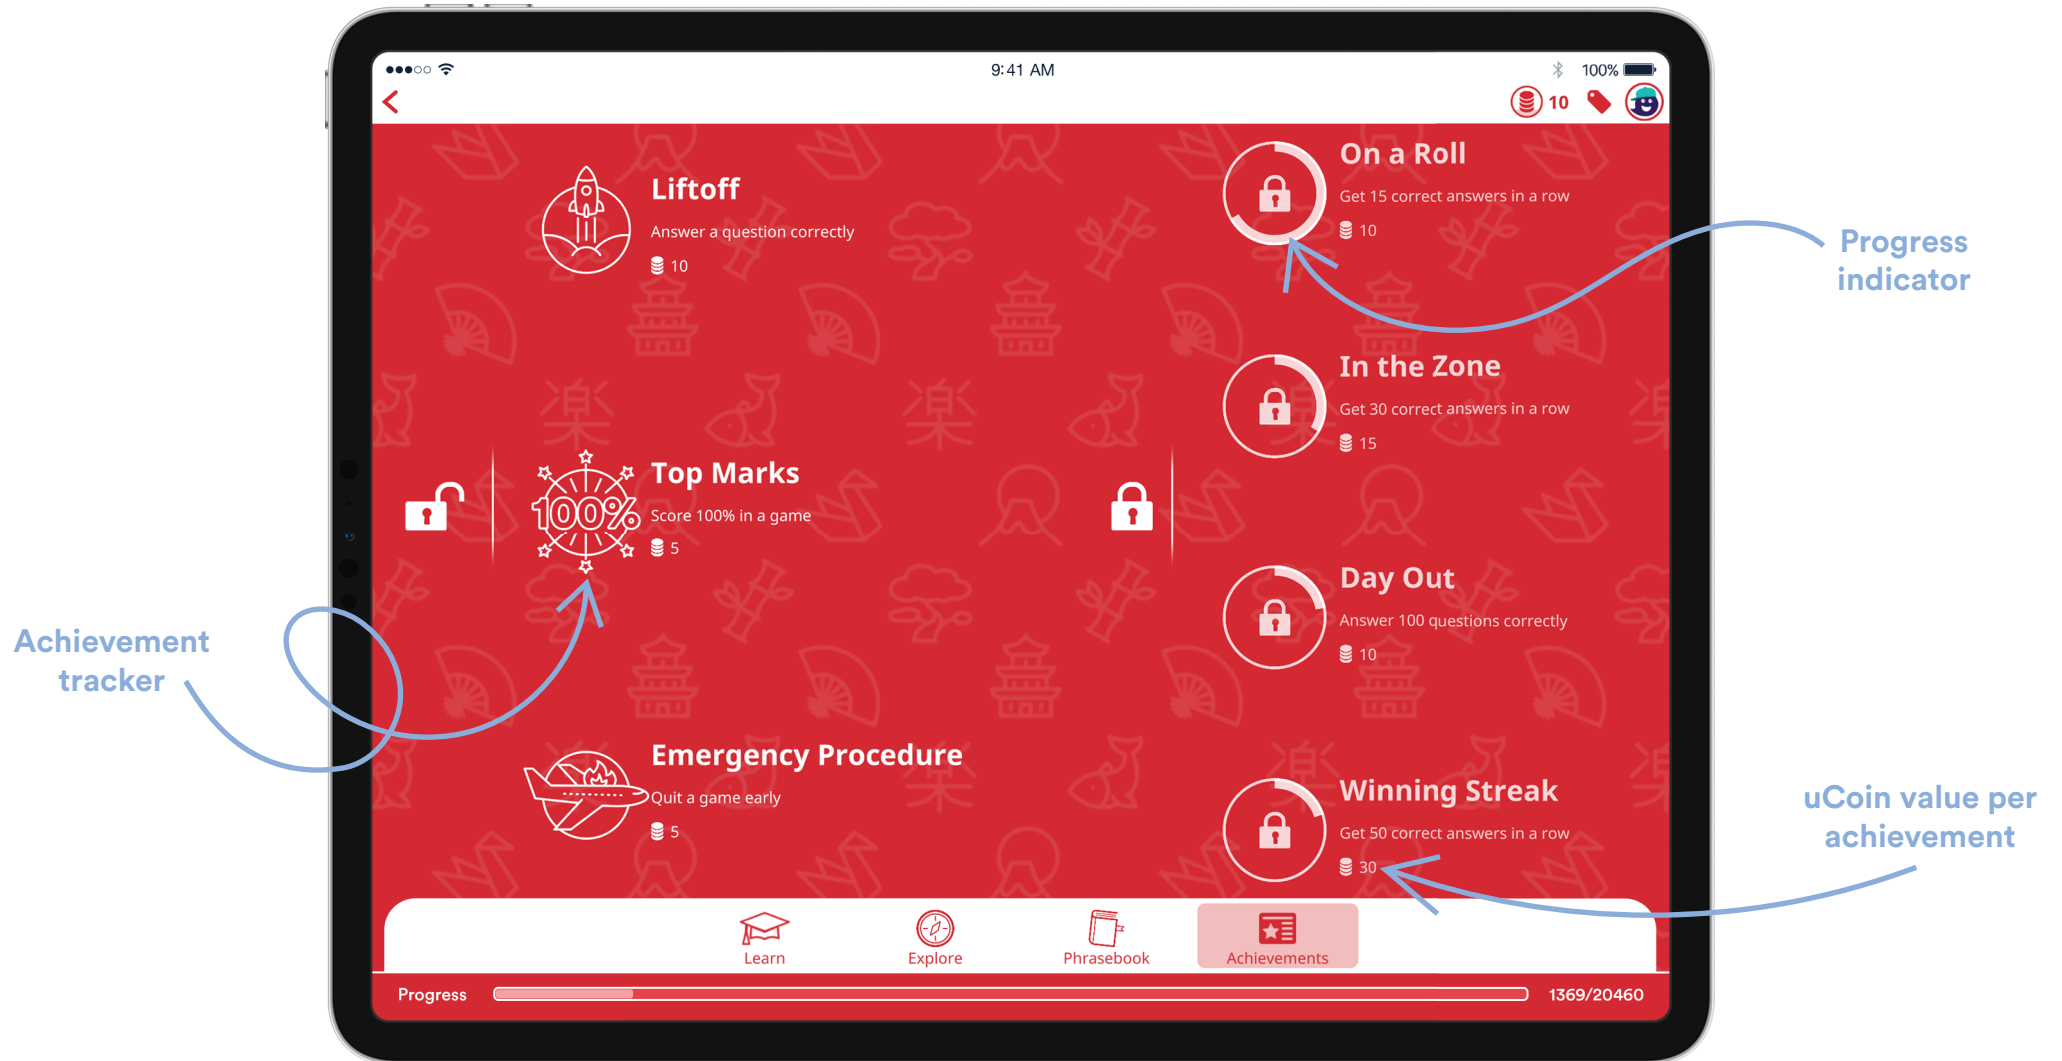

Culturally specific topic

The topic menu includes over 60 practical topics, covering everyday language like travel, food, work and social phrases. Each language also has a culturally specific topic featuring people, places, foods and symbols tied to that region. Users can browse the full topic list or jump straight in to a topic that suits their needs.

Users can search for specific words and phrases for quick reference, and save useful ones to the *My Phrases* tab. This makes it easy to revisit phrases they use often or want to practise more. It's a handy tool for travel, revision or everyday conversation.

Achievements

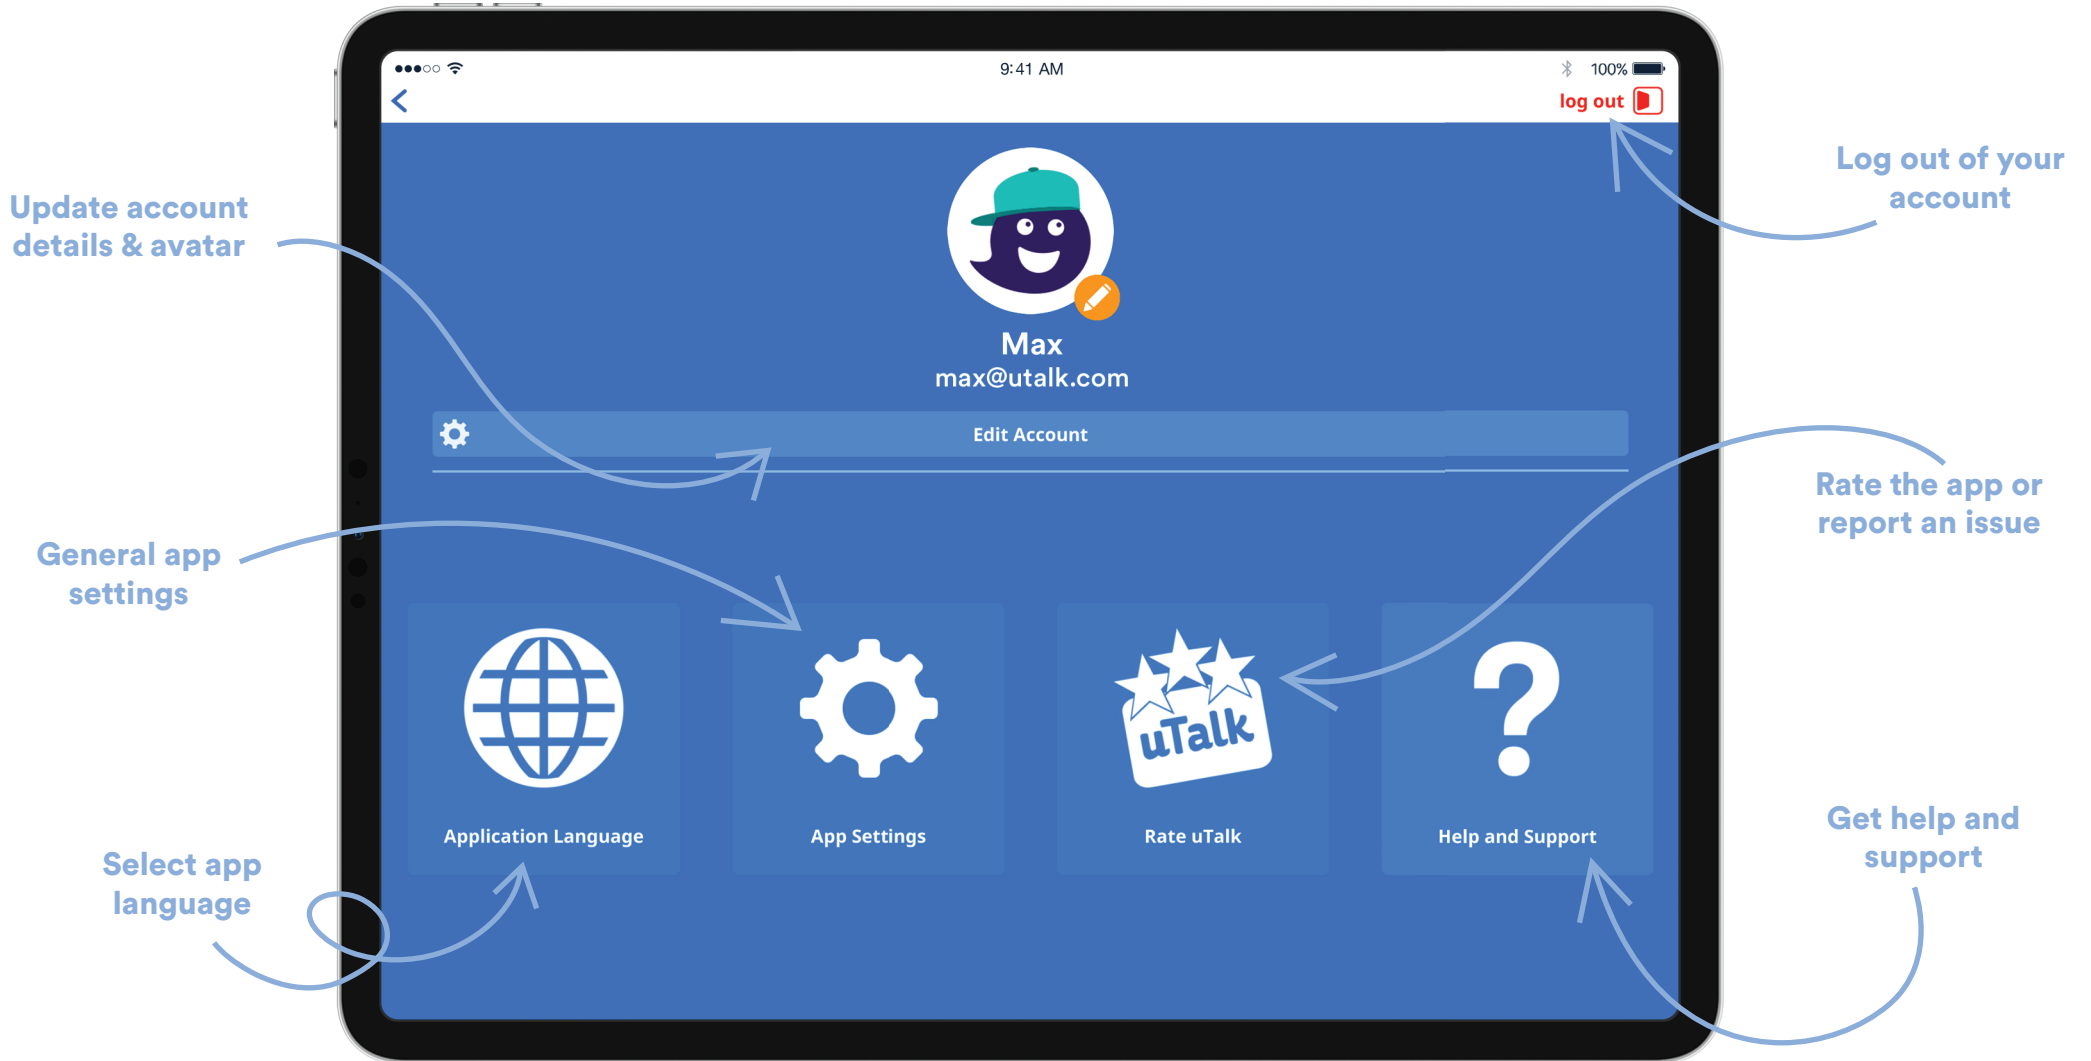

Users earn achievement awards for reaching goals as they play through the games. The Achievements view shows which awards have been unlocked and tracks progress toward others. It's a fun way to stay motivated and celebrate learning milestones. Each achievement also earns uCoins, an in-app currency that can be used to unlock games and topics.

The games menu gives access to six different activities designed to build confidence and understanding through listening, recall, memory and speaking. Each game offers a different way to practise, and users earn points and achievements as they play.

Settings

Access the *Settings* page by tapping your avatar from any menu. Here, users can adjust the app language, manage general settings, find help and support, and update their account details and avatar - all in one place.
